SKILLS

Machine learning
PyTorch
Graph Neural Networks
Neural Networks
NLP
Generative AI
Predictive Analytics
NumPy
Pandas
AWS SageMaker
Amazon Bedrock
AWS AI Services
Flask
FastAPI
SQLAlchemy
MySQL
SQLite
Python
C++
Git
GitHub
Ubuntu

PROFESSIONAL SUMMARY

AI/ML student (CGPA 3.95/4.00) and AWS Certified AI Practitioner who builds machine learning systems end to end, from graph neural networks to Flask and FastAPI backends. Interned at iLeaf Solutions working with Python, PyTorch and AWS AI. I care about honest evaluation and clean engineering.

WORK HISTORY

SOFTWARE DEVELOPMENT INTERN, iLeaf Solutions Pvt. Ltd. — Kochi, Kerala

Apr 2026 — May 2026

Worked in a sprint-driven commercial team, building hands-on with Flask, PyTorch and AWS AI across backend systems and databases.

Debugged core architecture setups, helping speed up code delivery and reinforcing sound design patterns.

Practised structured version control and the full software development lifecycle, from development to production.

EDUCATION & CERTIFICATION

B.TECH ARTIFICIAL INTELLIGENCE, Christ University — Bangalore

Jun 2025 — May 2029

CGPA 3.95 / 4.00

AWS CERTIFIED AI PRACTITIONER, Amazon Web Services

Aug 2026 — Aug 2029

LANGUAGES

English — Proficient (C2)

Malayalam — Native

PROJECTS

SENTRIX: BITCOIN ADDRESS RISK SCORING

Collaboration

Python · PyTorch Geometric · GraphSAGE · NetworkX

Flags illicit transactions among 200,000+ in the Elliptic Bitcoin graph by adding Personalized PageRank proximity features to 165 raw features and training a GraphSAGE classifier. Raised illicit-class F1 from 0.53 to 0.69 and AUC from 0.90 to 0.96 across 3 seeds, using temporal splits and leave-one-out seeding to prevent leakage. Traced the train-to-test gap to temporal drift rather than overfitting, and documented the limitations.

IOT FALL DETECTION & HEALTH MONITOR

Completed

ESP32 · C++ · Arduino · Blynk

Wearable on an ESP32 with motion (MPU6050) and heart rate (MAX30102) sensors, GPS and an OLED display. Blynk IoT sends automated emergency alerts when a fall is detected.

MULTI-AGENT AI RESEARCH

Research

LLM agents · Research

Researched contextual decision-making in clusters of LLM agents in low-infrastructure settings. Evaluated uses in precision agriculture and edge healthcare.

LAHJA: GIVING KOKBOROK A VOICE

Collaboration

Whisper · LoRA · NLLB-200 · XTTS v2 · FastAPI · Next.js

A language platform for Kokborok, a language with no major speech or language model support, that tells you which model produced each answer and how confident it is. I built the speech side: speech-to-text, voice-to-voice, transcription and translation. That included fine-tuning and publishing a Kokborok speech-recognition model, a LoRA adapter on Whisper-small (3.5M trainable parameters out of 244M) trained on 235 clips, about 33 minutes of audio. It roughly halves the character error rate compared with untuned Whisper (1.37 down to 0.72). Published as a research/demo checkpoint, not yet reliable enough for unsupervised use.

CLARITY: PERSONAL COURSE BUILDER

Collaboration

Next.js · Supabase · pgvector · Claude · Voyage AI

Studying from scattered notes and PDFs is hard to stay on top of. Clarity gives that material structure and turns it into something you can learn from step by step, so it works from your own material rather than generic content.
